-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gooch (US 6,466,325) in view of Nakagawa et al (US 4,575,304).

It is known to place one or more cameras on a robot arm to view markers placed on an object to help locate and control the robot arm relative to the object; see Gooch. Gooch notes that in the art it is known that the reference points can be placed in known positions (see column 1, lines 19-20). The robot arm of Gooch carried a "end effector 17". It would have been obvious to use this known use of reference points on the object to help guide the robot arm with any end effector or the like, such as an instrument which measures the shape of the object; Nakagawa et al shows it is known to place an optical shape measuring arrangement on a robot arm. It would have been obvious to use the known reference system such as discussed in the Gooch reference with such a shape measuring apparatus because those in the art would have believed that knowing the position of the measuring device accurately would have been useful in the accurate measurement of the shape of the object as a whole from the individual measurements at each location.
